

Glass production for boat industry, furniture, design

Company

Sovit is based in Pietrasanta, a town known for the presence of great artists and successful sculptors, a few kilometers from Viareggio Marina di Carrara and Livorno, the nerve center of the Tuscan yacht industry. The company, one of the most active and dynamic in the production and installation of glass for boat industry, has combined 20 years of experience in transforming glass with the know how gained through more than 30 years of boatbuilding. Thanks to this great expertise, Sovit can provide its customers a defect less product, that perfectly matches the geometries of the vessel and that complies with Italian and international regulations. Sovit collaborates with boat designer in order to realize new solutions capable of offering a unique product.

SOVIT glass

Looking beyond...

The influence of glass as a design element on board is becoming increasingly important: in this scenario, the Tuscan company Sovit is leader in the design and production of glass for yachting, providing a complete package of services from evaluation to glass installation on board yachts and mega yachts.

In the past 20 years, the use of glass on board has enormously increased; nowadays, both yards and designers think glass will be the new trend material to be used in future yachts and super yachts. This trend follows the evolution of shapes and the innovation that research and development have brought to glass manufacturing: great progress has been made and currently the applications of this versatile material are infinite. In the future, the presence of glass in yachts, even in their structure, will increase even more, thanks to the multiple shapes and futuristic silhouettes that only this material can ensure, due to its transparency. Owners prefer it yachts, with a close connection between interiors and exteriors. Therefore, glass is the perfect material for decoration, thanks to its beauty and long lasting life. Sovit has a significant position in the production of glass for yachting. Because of its long experience and the great number of orders successfully fulfilled, the company can provide today a complete package of services that can satisfy any request, even the most difficult ones, yacht and merchant ship builders can make.

Planning

Thanks to this great experience, Sovit can provide its customers a defect less product that perfectly matches the geometries of the vessel and that complies with Italian and international regulations.

The production process

Sovit produces a remarkable quantity of custom-made products. If you only think of the huge number of glass pieces you find in a boat, knowing that any curved section needs a particular mold, you can easily see how much the company works on any project. Glass can be modeled; it is therefore, the ideal decorative material. Structurally and aesthetically, curved glass can apply to any usage, both for interiors and exteriors; it can be used whenever you need a material with a visual impact. A gradual heating process makes flat glass moldable; the special male/female molds in steel Sovit produces allow obtaining any desired shape.

This particular procedure enables the company to manufacture a superior quality product with no imperfections. Nowadays, research and development of products in high-technology glass are very important; that makes of Sovit a reference point for designers and yards who always have increasing needs. The company can also supply a wide range of special glass products: ballistic and fire protection, as well as the best solution to limit the solar factor, always providing privacy and comfort.

Works

Sovit produces a large range of glass products (hulls, decks, superstructures, gangways, roofs, flying bridges, stairways, walls, furniture), providing its customers (among them, some of the most prestigious Italian and foreign yards) flat and curved glass for yachts, mega yachts and big ships. The company's rigid production process in glass manufacturing, grants a reliable product that fulfills any safety standard and technical requirements.

Heating System

Sovit produces both flat and curved glass with heating system and a defogging function to grant the best visibility and excellent performance in any situation.

Swicht ON/OFF

To grant your privacy without compromising elegance and innovation, we produce glasses that have a special interlayer to make them transparent or opaque with a simple touch.

Mirror TV

Sovit mirror TV is a unique product of its kind it provides news ideas for project managers and architects, and has many applications including furniture, walls, and other elements.

Military

The company's rigid production process in glass manufacturing, grants a reliable product that fulfills any safety standard and technical requirements.

Fireproof glass

Sovit can provide a wide range of fire-resistant glass products that fit any situations.

Art

Sovit is based in Pietrasanta, a town that is famous for the presence of great artists and successful sculptors with whom the company collaborates to create innovative and unique glass sculptures.

Certifications

Sovit only uses a glass that is approved and accepted by all the main classification registers. The glass is tested in the factory for mechanical resistance in the presence of supervisors from the Naval Registers.

Full Services

Sovit technical staff can answer any questions and tackle complex requests. Thanks to a constant professional training, we can provide a wide range of services, from devising three-dimensional solutions to final installation on board. The Tuscan company can also supply a worldwide after sales service and the Refit.
